International company with strong and professional background is looking for new candidate on the position

Network Engineer

The Network Engineer is responsible for the administration and development of the network technical architecture within G4S. In addition day-to-day administration and provision of 3rd line support for all data and telephony services.

Responsibilities:

- To assist Line Manager in the effective day-to-day management of the data and voice networks
- To assist in the design, delivery and maintenance of the network infrastructure that underpins operational services managed within IT Infrastructure & Operations. Ensuring tasks and incidents are prioritised and resolved in accordance with business requirements.
- Provide support to the 2nd level operational support teams for the resolution of complex 3rd level support incidents.
- Undertake root cause analysis of reported faults, design and implement fixes to problems.
- To provide technical resources for infrastructure and application projects as defined through the Project Office.
- Ensure that system builds are consistent and manageable, implementing and utilising proactive monitoring tools, where possible.
- Create and maintain support documentation and operating procedures.
- Document technical 'fixes' and ensure the knowledge base is updated.
- Compile and prepare periodic status, performance, and trend reports for management's review.
- Ongoing capacity planning and management of the network infrastructure in line with Business growth plans.
- Secure the network infrastructure in line with security policies and practices ensuring that adequate and robust security measures are designed, implemented, and updated based on Corporate Standards.

The Ideal Candidate:

The successful candidate will be able to demonstrate the following skills and competencies:

- In-depth hands-on technical knowledge of: LAN, WAN/MPLS, Direct Connects, Security Gateway Services (e.g. Internet Proxy), Multi-vendor Firewalls, VPN Connectivity, Intrusion Detection and Prevention Systems, SFTP
- Technically proficient to be able to communicate issues/actions with other Support Teams
- Strong Customer Service skills, effective in working with customers at all levels
- Ability to liaise with technical experts from other disciplines
